Survey of SWBC activity in

INDONESIA

1992 Survey of SWBC Activity in

INDONESIA

INTRODUCTION

The decade of the 1980s saw quite a big change in the Indonesian broadcasting scene as many of the county government-supported "RPD" stations deserted the shortwave bands. Although a few of these stations shifted to FM, most chose to concentrate on broadcasting to a growing audience of Indonesian medium wave listeners. We have chosen to leave a few of these now "MW-only" stations in The Survey for reference purposes. They are marked specially by an "X". Please refer to the symbol legend below.

The trends of the Eighties were not all negative, however. A number of RPD stations did come on the air, too. These new broadcasters were located in some of the more remote areas of Indonesia rather than the densely populated areas of Jawa and Coastal Sumatera. In denser urban areas, especially in Jakarta, there has been a real proliferation of illegal-but-tolerated privately owned SWBC stations serving primarily local audiences. These stations, akin to the more well established Europirate stations, tend to hold to reasonably regular schedules and reasonably predictable frequencies. The Indonesians have chosen to call these stations "amatir" stations. These "amatir" stations usually operate with very low power and with less than efficient antenna and ground system. Therefore, their reception outside Indonesia is VERY rare. Never the less, a few of these stations have been logged at least once from Australia. To our knowledge, there have been no QSLed loggings from North America and only four or five solid loggings. Most of the "amatir" loggings and information provided in this survey were developed by the diligent efforts of Indonesian DXer Aboe N. Thaliep.

HISTORY

This database was begun, almost a decade ago, by Mitch Sams as a service project for the listening group, Numero Uno. When first printed, it was a single page listing of the DX loggings of Indonesian stations reported during the preceding year. While there were some few important loggings from Australia and Europe, most entries were the loggings of senior DXers active in North America. Since its' inception, The Indonesian Survey has been published approximately every two years. John Bryant and Fine Tuning's Special Publications arm took over The Survey in 1986. John expanded the listing greatly, using sources in Europe and Australia and placed it in a computerized database. In late 1987, Jon Williams of Indiana took over maintenance of the database and John Bryant continued to handle publication chores. By 1989, relations with the Australian group OZDX had matured, and both groups decided to publish a joint Survey at the beginning of the appropriate DX season. In 1991, David Clark and John Bryant undertook to rewrite the database almost completely since there had been massive changes in the Indonesian broadcasting scene since the 1989 publication. Most Indonesian stations, including the largest and most stable, have undergone significant changes in their operating schedules in the past three or four years. This 1992 publication reflects those changes.

Also, there has been very significant growth in the sophistication and breadth of knowledge of DXers worldwide concerning things Indonesian in general and

Indonesian broadcasting in particular. In the area of the general understanding of Indonesian history and culture, we must point to the proliferation of superb guide books. These include, most especially, those from Insight Guides, Lonely Planet and Moon Publications. Our cultural, geographic and historical understanding has also been broadened by the television series and wonderful book *Ring of Fire* by the Blair brothers.

These interests, along with our understanding of the Indonesian broadcasting scene, have been furthered also by several quite scholarly articles published in various club bulletins and in Fine Tunings own Proceedings. Among the authors of these important works are Ralph Perry, Bill Sparks, Harold Cones, David Clark and John Bryant. John also wrote and Fine Tuning published *A DXers Handbook... Indonesia*, considered the definitive reference for Indonesian DXing. John, Tan Gwat Lan and Gerry Dexter are responsible for *The Indonesian Language Lab* published by Gerry's Tiare Publications. *The Indo Lab* allows DXers to communicate with Indonesian radio stations in sentences so well written that DXers using the lab are usually congratulated on their use of the language in their QSL replies.

Finally, none of this work would have been possible without the very diligent efforts of many veteran DXers on four continents. Those involved in slowly unlocking and decoding Indonesian broadcasting include all of the above DXer/authors, along North American DXers Don Jensen, Kirk Allen, Kevin Atkins, Steve Reinstein, and Ed Kusalik. Many contributions were made by the strong contingent of Australian DXers, most of whom were involved in the 1989 FT/OZDX joint effort. These include Geof Cosier, Peter Bunn, Dave Foster, Dave Onley, and Craig Edwards. Many of the best known names in European DX circles have also proven very helpful in decoding Indonesian broadcasting. These include Gordon Darling (now of New Guinea), Anker Petersen and many others. Finally, this publication is vastly improved by the insights and loggings of Indonesian DXer Aboe N. Thaliep of Batang, Jawa. His contributions to many clubs have proven vital to the efforts of many of us in recent years.

PRIMARY SOURCES

The primary sources for the 1992 Update were loggings, station schedules and QSL data reported in the bulletins of Fine tuning, OZDX, DSWCI, Numero Uno and WDXC.

SYMBOL LEGEND

Asterisks (*) indicate questions as to whether this entry in the database is still valid. The situation is usually noted also as NOT REPORTED RECENTLY. A "X" before an entry in the BY FREQUENCY database indicates that this station was included in the 1992 database for Reference Purposes only. The station is now broadcasting on Medium Wave Only. The notation ANT indicates that the information was largely provided by Indonesian DXer Aboe N. Thaliep of Batang, Jawa Tengah, Indonesia.
