

MEDIA NETWORK VINTAGE VAULT: AN INDEX

An Index to Media Network online recordings
posted through *December 2016*

Compiled by
Jerry Berg, jsberg@rcn.com

Note: Since this index was first compiled in 2016, the Media Network Vintage Vault website has been restructured. As a result, the below instructions for finding particular items in the Vintage Vault are no longer applicable. For example, the website no longer organizes the programs in monthly groupings. But the good news is that the old system has been replaced by a simple search box at the top of the homepage. In a perfect world, a search using the search box would turn up the same entries contained in this index. This is not a likely result, however, especially for entries shown in this index under Index Entries By Subject Matter. To maximize the likelihood that you will find all the material that is available, search both the website *and* this index.

This index to the recordings posted by Jonathan Marks on his [Media Network Vintage Vault](#) website has been prepared in order to make it easier to locate recordings on particular topics. Jonathan continues to post additional programs periodically, and has announced that he will be producing new Media Network programs online starting in 2017. This index covers all the programs that have been posted through the month and year shown above (**new entries are in bold**). Jonathan has explained the background and structure of the Vintage Vault most recently in [MN1612-01](#), and from time to time in the past in [MN1209-01](#), [MN1401-02](#), [MN1505-11](#), and [MN1512-01](#).

There are hundreds of programs in the Vintage Vault. Each program has a written summary description prepared by Jonathan. These can be found in monthly groupings shown on the right-hand side of the Vintage Vault website pages. The months and years shown there are the months and years when Jonathan posted that group of recordings and summaries. (Most of the summaries also show the program's original broadcast date.)

The entries in this index are based on the summaries. In some cases Jonathan's summaries are detailed, in others they are more general, and the index reflects this. In a few cases I have gone back to the recordings to clarify an item, but in general I have relied on Jonathan's summaries. *It is important to note that even the most detailed of the summaries do not describe the full content of a given program. The summaries are more in the nature of a sampling of a program's content, or a highlighting of the program's main features, rather than a full description of all the topics covered. Thus there is more content in the recordings than is referenced in either the summaries or this index.*

The first half of the index is arranged by country and contains items that are mainly country relevant. The second half is arranged by subject matter (see p. 25 for a list of all the subject matter categories). Many entries are indexed in more than one place. When you find something in the index that you want to listen to, go to that program's summary and either click on the forward arrow of the embedded player, or click on the MP3 file and use your own player, to listen to the program. (I find it easier to use my own player, which I can maximize. This makes it easier to click through the program in small segments and locate a particular item. This doesn't take long; the individual items in Jonathan's summaries usually track the order in which they appear in the program.)

The first column below, "Date Posted," identifies the program, e.g. MN1205-02 means the Media Network program posted second from the top in the May 2012 group, MN1205-03 means the program posted third from the top in the May 2012 group, and so on. "Broadcast Date" is given in year/month/day format, e.g. 990325 (March 25, 1999). (Some of the summaries do not show the complete broadcast date.) I have included links to some relevant videos posted by Jonathan, but not to every video he references. Videos are marked "v" rather than "MN," e.g. v1008-03. (Jonathan's full collection of videos is [here](#).) There are a small number of items posted among the summaries that are messages from Jonathan rather than recordings. These are marked "[no file]."

Index entries are generally arranged alphabetically below each country heading or subject-matter heading, but in some cases related entries are grouped together and listed chronologically. Because originally I prepared this index for my own use, the indexing may seem a little idiosyncratic, so let your eye scan broadly in order to catch all the entries that might interest you, or better yet, search this index electronically for relevant terms. Of course, you can also search the Vintage Vault web pages themselves.

I hope to keep this index up to date, and corrections are welcome. Many thanks to Jonathan for preserving this priceless collection of media material.
