"It Is Simply Uncanny To Be Listening To Some European Or South American Station As Clear And With As Good Tone As Local Station"

C. K. Swayze, Flint, Michigan

"Last Night I Listened to The Duluth Symphony Orchestra. It Was Almost Unbelievable — Every Note So Clear — I Have Never Heard Anything Like It Before From Any Radio"

I. Campbell, Mogadore, Ohio

VATICAN CITY CLEAR AS A BELL

"Mrs. Swayze is getting just as big a thrill out of the new radio as I am. She called me this morning about eleven and told me she just got Vatican City, Italy, just as clear as a bell, in fact heard the bells and even the clock ticking in the studio. Not only is the tuning of short wave stations thrilling, but the SCOTT ALLWAVE holds a new enjoyment for us when we tune in our favorite American broadcast stations. I have never heard a radio that made each program so realistic, is so sensitive, and so selective. We are getting programs from stations that we never dreamed of getting on our other radios. DJB, DJD, DJX, Berlin, Germany; FYA, Paris, France; HVJ, Vatican City, Italy; EAQ, Madrid, Spain; GSC, GSB, GLS, GSF in London, England; HJ1ABB, Medellin, Colombia; COH, COC, Havana, Cuba, HJ1ABB in Barranquilla, Colombia; HJ1ABE, Cartagena, Colombia; HJ4ABL, Manizales, Colombia; HP5B, Panama City, Panama Republic. I have heard all these stations as clear as you would a local American station, also heard them identify themselves in English. These are stations I have received since last Friday when I installed the Scott Antenna. I have been picking up two or three new ones each day."

C. K. Swayze, Flint, Michigan.

FULFILLS ALL CLAIMS FOR IT

"I am more than pleased with the performance of my SCOTT ALLWAVE RECEIVER. The first receiver, to my knowledge, that fulfills all claims made for it by its producer, a truly wonderful instrument. I experienced no difficulty in locating most European stations, Central and South American stations." C. Eickmann, Hyattsville, Md.

ONE of the most difficult problems facing the prospective purchaser of a radio receiver, is to decide just what merit there is to the claims made by the manufacturers of various receivers. It is only natural that a manufacturer should be enthusiastic about the receiver he is building, but whether it will arouse the same amount of enthusiasm in the purchaser after he operates it, is something else. For that reason, I believe this issue of the "Scott News" is deeply interesting because the description of the results obtained with the new SCOTT FULL RANGE HIGH FIDELITY ALLWAVE RECEIVER is not my description, but is taken from letters that have been written to me by owners during the past few weeks. These letters give you impartial, authentic information of the kind of reception being obtained by Scott Owners in various parts of the country.

However, if before placing your order, you would like to actually hear and see a SCOTT ALLWAVE RECEIVER in operation, listen to its tone, hear the clarity and volume with which it brings in distant foreign stations, write me, and I will be very glad to give you the name and address of the Scott Owner nearest to you.

ADMIRES PRECISION

"We all have admired the precision and careful way in which this set is built. It is to be compared only with the 16 cylinder Cadillac, which I consider the best car on the market, and you know how they are built."

P. Chaffin, Bethesda, Md.

CALCUTTA, INDIA, WITH GOOD LOUD SPEAKER VOLUME AND CLEARNESS

"It is hard for me to express just how much we enjoy our new SCOTT ALLWAVE. Each evening we receive programs from Berlin and London with volume and clearness comparable with WGN. It certainly is a pleasure to tune in a wonderful orchestra and have them play for an hour or more and not be interrupted by a number of advertisements. To tell you the truth, I was more or less in doubt as to just what kind of results I would get from my receiver. I had read so many advertisements by various radio companies as to what wonderful reception was possible with their receivers, and then when I tried them out I was always greatly disappointed. This is not true of the SCOTT ALLWAVE. Every word of description contained in your folders and letters has been upheld by the remarkable results obtained from the SCOTT. One station which we logged with very good loud speaker volume and clearness was Calcutta, India. This station was received at 9:00 A. M. This is really remarkable considering that Calcutta is 12,000 miles distant from South Bend."

D. Hoffman, South Bend, Indiana.

NO TROUBLE GETTING EUROPE

"Had no trouble getting the following European stations in the afternoon—DJD, DJB, Germany; FYA, France; EAQ, Spain; 2RO, Italy; CT1AA, Portugal. The reception on these stations was quite clear and distinct. In the evening I picked up many South American stations as well as one of the German stations."

C. P. McNulty, Milwaukee, Wisconsin.

EVERY WORD FROM ENGLISH STATION AS DISTINCT AS IF LOCAL

"My receiver was set up at noon, May 9th. On that evening I began with local broadcasts. The reception was marvelous. Just for a trial I switched on the short waves and soon was listening to a speech made by someone who, every now and then, addressed another as 'Your Majesty.' When he finished, the King of England replied. Every word was as distinct as if it were coming from a local station. I was still skeptical until the station was announced as GSL, London, England."

G. R. Boyce, Chicago, Illinois.

QUALITY OF REPRODUCTION NOTHING SHORT OF MARVELOUS

"I have delayed writing you until I was familiar with the operation of the new SCOTT ALLWAVE Receiver and in a position to render a fair report. And even now—after a three-weeks' test—I am fearful of seeming to slop over by using too many superlatives in its praise. I don't believe though, that I can say more than that it is all you claimed for it. In spite of the fact that receiving conditions have been very unfavorable most of the time, I had no trouble from the first in picking up the usual European and S. A. stations; and the only morning I tried, I got VK3ME, holding him for over an hour. But it is what one can do in the way of controlling the quality that appeals to me. The quality of reproduction I've been able to get has been nothing short of marvelous—limited, it seems to me, only by the broadcasters themselves and their 10 Kc. separation. I have owned or played with most of the better receivers on the market today, including _____, and I don't think I overstate it when I say that the SCOTT is almost as far ahead of any of them as to the average set is ahead of the first set I owned (a generative reflex) way back in 1924."

R. H. Jones, Appleton, Wis.

HAVE BEST RADIO NOW

"As much as I hate letter writing, I think I must take time out and tell you all about my SCOTT ALLWAVE. For the last 12 years I was trying to get the best radio built and sometimes I thought I had it, for among them were such as —, —, —, but after trying my SCOTT ALLWAVE, I know that I really do have the best radio now. Just now I am enjoying a program from DJD, Berlin, Germany, although there is a storm and thunder prevailing."

J. P. Morris, Harmarville, Penna.

WAU, NEW GUINEA

EVERY NIGHT DOES TRIP AROUND WORLD

"The SCOTT ALLWAVE arrived about two weeks ago and I have delayed writing to you so that I could give it a try out first and would be in a better position to express my opinion of it. On opening it up it appeared to justify the name 'The Rolls Royce of Radios.' I installed it in the Wau Clubroom and the interest and most favorable comments it has created would astound you. I will give you some idea of the locality where the set is installed and you will see that the position is about as bad as possible for reception: Wau is about 5 degrees south of the line and is about 40 miles from the coast, but to reach Wau means a walk of 7 days over range after range of mountains up to 10,000 feet high. This walk is not often taken on, excepting by natives, as we have four most up-to-date air services with over 30 airplanes for passengers and freight. It is quite a common sight to see horses, cattle and motor cars and complete trucks being unloaded from the big three engine Junkers that are capable of carrying 4 tons in a lift. Wau is 3,000 feet above sea level and is surrounded by 10,000 feet mountains and almost every day we get a tropical disturbance; however, nothing seems to upset the reception from the SCOTT. The only complaint I can make about it is, that I spend less time at my work than I should. I listen in to London every afternoon from 3:30 to 5:30 P. M. The reception from this London station is wonderful and London is over 11,000 miles from Wau. When Big Ben strikes the hour, and although I only have the volume on less than one-fourth, the rafters in the room shake. It is just the same with speaking, singing or music. Every night I do a trip around the world, commencing at Hong-Kong, then Japan, Manila, and all Australian stations, Moscow, Rome, Paris and American stations, and many others that are foreign to me. These stations all come in with loud speaker strength and wonderful clarity. On Tuesday I listened in to Tokio, Japan, calling Paris and the announcer kept saying that Paris was not coming through at all well. I tuned into Paris and got wonderful reception. I could have sold my set three times already, but find I couldn't do without it. In conclusion, I would like to thank you for the interest that you have taken and the trouble you have gone to, and once again to express my opinion that the SCOTT ALLWAVE is the receiver of receivers."

T. Flower, Wau, New Guinea.

NOW EXPERIENCING RECEPTION AS LOOKED FOR FOR LONG TIME

"I suppose it is about time that I let you know that I received the receiver in good condition, and it is working fine for this kind of hot and dry weather, due to static; although, by using the noise suppressor I could drop the static interference to a low degree and get favorable reception. It is a wonderful instrument and has a very fine tone. I am always hearing these words when anyone comes in to see it: 'I'm going right home and kick mine out'—'I never seen a radio like that'—'It sure is beautiful'—'It has such a wonderful tone.' Well, the receiver sure speaks for itself, and I am well pleased with it. I have received DJD in Germany and a station in London, and I am only using a straight aerial at present about 75 feet long, but I expect to do better when I get the aerial up that was shipped with the receiver. I am experiencing reception now that I have looked for for a long time."

G. H. Luft, Penbrook, Penna.

SELECTIVITY INCREDIBLE

"Your beautiful SCOTT RECEIVER arrived promptly as promised and no time was lost in its installation, and there was no difficulty in bringing in foreign stations. I have always thought my location was exceptionally noisy, but with the combination of controls you have inaugurated, noise is now a minor matter. The tone is priceless, whether from American or foreign stations, and the selectivity is incredible, and as I am indulging in superlatives, and one must in talking about your SCOTT, may I mention the accuracy of the calibration both on short and broadcast bands. As a matter of fact, when the receiver was first installed, and before the volume was turned up, I dialed to GSD on 11.75 and there it was. Well, the set is absolutely marvelous and I thank you for it."

C. Goodman, Philadelphia, Penna.

EXCEPTIONAL TONAL QUALITIES

"Everyone who has heard the set so far has commented on the exceptional tonal qualities, and I am more than pleased. One of the most interesting observations is that a poor orchestra sounds just what it is, and there are a number of performers that I could stand on my old radio but that are shown up too badly on this one. I heard Ernest Hutchinson play a piano recital from a local studio yesterday which could hardly have been improved on if he were playing in my own living room."

J. Honeywell, Baltimore, Md.

NOTHING SEEMS DISTANT

"The set is positively wonderful in every detail and does all you say and claim. Words do not express the action and pleasure it has given me. Nothing seems distant with this receiver."

J. Uhler, Philadelphia, Penna.

THE BEST SET IN TOWN

"I have only compliments to express to you for this new model which gives very good results—clear tone, volume, etc. In the opinion of everyone who heard it, it is the best set in town."

N. Chassagne, Jeremie, Haiti.

LONDON—BERLIN—FRANCE WITH VOLUME EQUAL TO AMERICAN STATION

"The new SCOTT ALLWAVE arrived yesterday. I took it out of the boxes at 3:30 and at 5:30 I not only had it in operation, but had received London, Berlin, and a station in France; all coming in perfectly and with marvelous tone quality and volume equal to any American station."

A. McAllister, Bridgeton, N. J.

SURPASSES THEM ALL

"I had my SCOTT ALLWAVE RECEIVER installed last week Thursday night. I have had many sets in the past ten years, but this surpasses them all. The tone is beautiful. On the short waves I have had London, Paris, Spain and South America. I am delighted with the set."

H. Lally, New York City, New York.

INTERNATIONAL NEWS FROM ENGLAND EVERY NIGHT

"I have waited to give the radio a good try before I wrote you and believe me, it really does live up to its reported performance, and the tone quality leaves nothing to be desired. We get the international news from London, England, every night on the 25 meter band. The machine itself is a work of art; both outside and inside are beautiful. When any visitor comes to the house, I have just got to show them the inside with all the wonderful finish you have put there, and that, with the superb tone quality, makes them all exclaim that you have, without a doubt, the world's finest radio (no exceptions)."

A. W. Galloway, Flint, Michigan.

PERFORMANCE MARVELOUS

"The performance of the receiver is marvelous. After using the best receivers on the market from the early days of radio, I can truthfully say that anyone who has not heard the SCOTT ALLWAVE has never listened to a program as it is transmitted. It does not sound like radio. Close your eyes and you have no difficulty in seating yourself in the auditorium where such a program might be in progress. A touch of volume on a pipe organ, large orchestra or band gives you a thrill that words cannot adequately describe. No noise, no vibration, no sour notes. It is truly a musical instrument. In the short waves it is exceptional. Yesterday on 18 megs. I listened to Buenos Aires direct with better results than the rebroadcast through KYW, a 10,000 watt transmitter only 40 miles away. KYW on local broadcasts is perfect at this point. Every word was clear and understandable. I could make it heard all over the house, without the semblance of distortion."

F. L. Stuart, Allentown, Penna.

A WONDERFUL INSTRUMENT

"I am writing you to inform you that I think your radio is a whale of an instrument. The tone is beautiful and is truly a wonderful instrument."

F. C. Richards, Cincinnati, Ohio.

J. G. ARAUJO, MANAOS, BRAZIL

MASTERPIECE OF MODERN SCIENCE

"I am writing you today to let you know my impression regarding the SCOTT RECEIVER. Despite the clarity and details of the description in the advertising folders published by you, we admit that everything amazed us. We do not know what to admire most; whether the quality of the material or the care and solidity of the construction, combining to make a set that delights and represents a true masterpiece of modern science. The quality of reception is much above what you advertise, to the extent that we do not believe anything more perfect could be conceived. The volume, stability and fidelity of reproduction surprised even the most exacting listeners, giving cause to affirm that whoever has not heard a SCOTT is still unaware of the marvel of radio."

J. G. Araujo, Manaos, Brazil.

AMAZED AS WELL AS DELIGHTED

"To say we are pleased with this set would be expressing it mildly. We are simply amazed as well as delighted, and I want to say right here, Mr. Scott, you have another strong booster for SCOTT RADIOS. Regardless of the most stormy, unfavorable weather, the reception is excellent. I have experienced no difficulty whatsoever in bringing in London, Berlin and Holland, and this with my old single wire antenna."

E. J. Grippen, Endicott, New York.

FIRST HALF HOUR OF OPERATION BRINGS IN WITH AMAZING VOLUME SPAIN, ENGLAND, GERMANY, ITALY

"I have received my new SCOTT RECEIVER and I am very well pleased with it. In the first half hour of operation I was able to bring in with amazing volume and clarity the better known stations of Spain, England, France, Germany and Italy."

H. C. Olmstead, New York City, N. Y.

STONE SIMPLY SUPERB

First, I must tell you how thoroughly pleased I am with the new SCOTT. And that is a compliment indeed, coming from

anyone who has been extremely critical in the past! Its tone simply is superb, by all odds far superior to anything I have ever heard. Indeed I hope you will feel perfectly free to refer any prospective purchasers in my neighborhood to me. I shall be glad to invite them to my home where they may hear for themselves the performance you claim. Such proof should do more to sell SCOTT than the printed word, and I am happy to extend you this small degree of cooperation. Last Sunday morning I had VK2ME with such clarity and volume that Mrs. Eisenhardt, from her bedroom, asked me to change my mind and take a walk instead."

R. Eisenhardt, New York City, N. Y.

NOW REALIZES HOW MUCH REAL MUSIC WAS MISSED

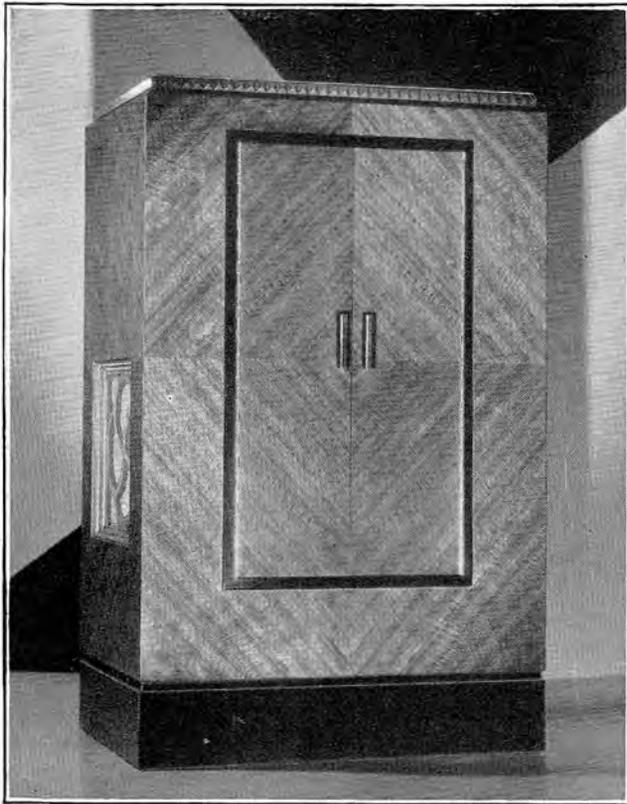

"I have been so busy enjoying my SCOTT ALLWAVE that I have delayed writing you and telling you just how pleased I am with the reception I am getting. I can now realize how much real music I have missed with my old set. Even folks' voices sound so much clearer and natural and singers are so much sweeter. Band music is my favorite and I can hear instruments with this new receiver which were utterly silent in the old set. Organ music, too, sounds so soft and mellow that it is sheer delight to tune in this set. We still have our old set and now when we tune it in for comparison with the SCOTT ALLWAVE, it is hardly conceivable that a radio can bring in such perfect reproduction of sound and voice. Our favorite programs have become a source of greater pleasure and I consider my SCOTT ALLWAVE the best buy, dollar for dollar, that I have ever made."

W. E. Beyer, Chicago, Illinois.

MOST BEAUTIFUL THING BOTH IN APPEARANCE AND PERFORMANCE

"I think that the SCOTT ALLWAVE is the most beautiful thing both in appearance and performance that I have ever seen or heard. I want to congratulate you for creating such a marvelous receiver. One of my neighbors told me this morning that he certainly did enjoy my radio last evening. I asked him why he did not come over, and he told me that it would make it less real not to see the orchestra, for he could not see how a receiver could reproduce such fine music (I had DJD, Berlin, tuned in at the time). If I could talk to you personally I could express myself better, for I cannot say too much for my SCOTT RECEIVER. It is just what you said it was, and will do what you said it would do and more, Mr. Scott. I can hear the intake of a person's breath between words when they are speaking into the mike. I know that the more sensitive and selective a receiver is the more noise or other interference it will pick up, but within reason it can eliminate this if tuned right. I could go right on telling you the fine points about my receiver, but you know what it will do. Here are some of the stations that I have tuned in (but by no means all that I listened to): 12RO, Rome, Italy; EAQ, Madrid, Spain; DJD, DJA,

(Continued on page 6)

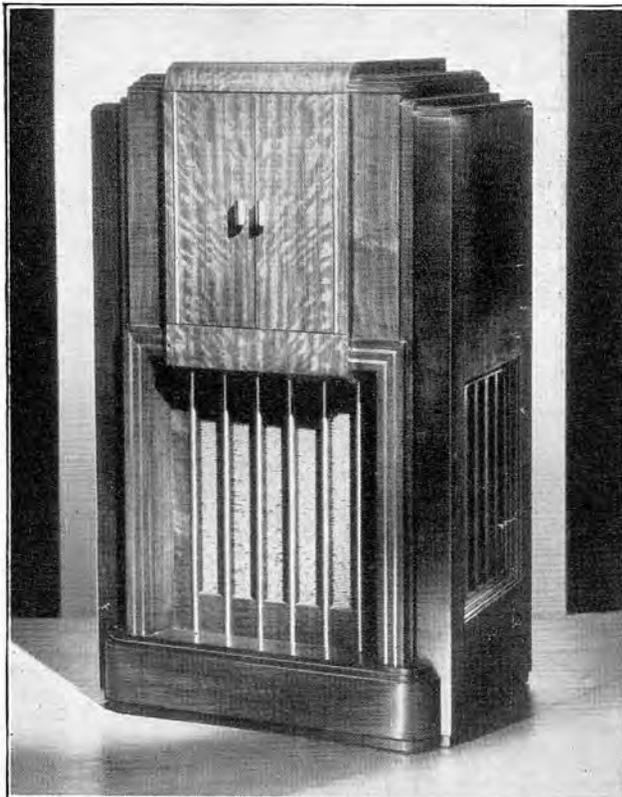

THE Milton Grande

Scott Consoles

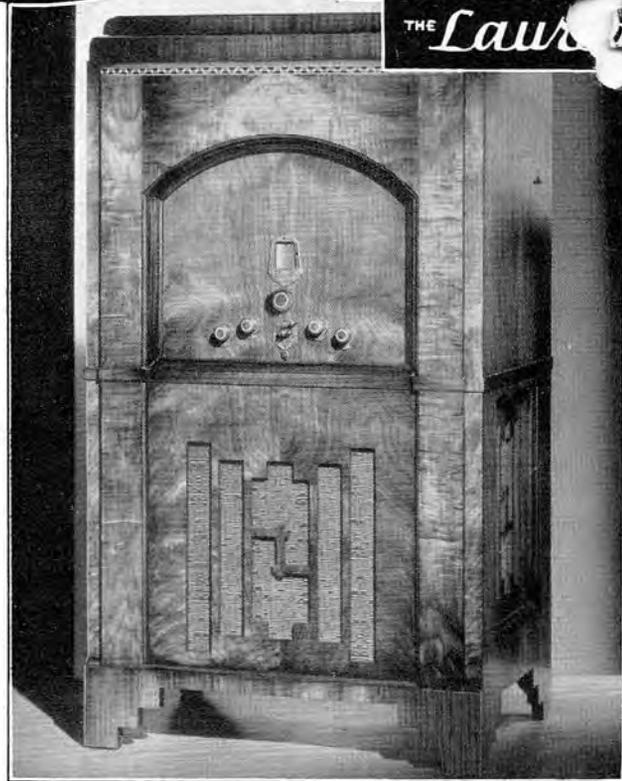

Such an instrument as the SCOTT ALL-WAVE deserves a cabinet of quality comparable to its own superior merit. So we have caused to be fabricated, in choicest woods and styles, an exclusive line of consoles matching scientific acoustic qualities with true beauty. Described and priced in a brochure which will be sent upon request.

DJC, Berlin, Germany; PRA, Rio de Janeiro; VK3ME, Melbourne, Australia; Radio Colonial, Paris, France; GSC, GSB, GSA, London, England; PHJ, Holland; REN, Moscow, Russia; VK2ME, Sydney, Australia, and XETE, Mexico. I have also received a lot more than that which I did not log that come in like a local. I want to thank you again for such a wonderful receiver."

A. R. Hodges, Lynchburg, Va.

BEST TONED RADIO THEY HAVE EVER HEARD

"I received my SCOTT RADIO on the 7th of May and have been having a lot of pleasure from it since. Have had a good many people in to see and listen to it, and they all agreed that it was the most beautiful and best toned radio that they had ever seen or heard. Have had England, Germany, France and Holland all like locals."

J. S. Rouse, Mercedes, Texas.

GETTING ENGLAND, GERMANY, FRANCE EVERY DAY AS CLEAR AS LOCAL STATIONS

"I have been getting England, Germany, France, every day as clear as my local stations. Australia comes in every morning very clear. I am highly pleased with the SCOTT; it is a wonderful receiver and we are enjoying it to the fullest extent on both broadcast and short wave bands."

Mr. Jos. Moquin, Cedar Rapids, Iowa.

TONE AS NEARLY NATURAL AS WILL EVER BE PRODUCED MECHANICALLY

"The tone is as nearly natural as I presume will ever be produced mechanically. That first night we heard the King's response to the House of Lords from an English station clearly and distinctly, even though an electrical storm was going on out of doors."

P. E. Kerkow, Covington, Ky.

EUROPEAN STATIONS WITH PLENTY VOLUME

"I have been using my SCOTT ALL-WAVE for about three weeks and want to say that I am perfectly satisfied with it. The tone quality is wonderful, and while I do not fool a great deal with short wave, I have brought in all principal European stations with plenty of volume and good quality. South American stations are easy to get all down the line."

L. E. Hawes, Springfield, Mass.

FINISH AND APPEARANCE BEAUTIFUL

"Just a few lines to let you know what results I am getting with my SCOTT ALL-WAVE, and what I think of it. I have listened to or tuned practically all the better receivers on the market, and in my opinion, no receiver I have seen is comparable to the SCOTT. The finish and appearance is beautiful, the workmanship excellent, the performance, tone and power exceeding any other receiver I have used or heard. Have heard with good quality the principal foreigners, and on the broadcast

bands get stations never heard before. I wish to thank you again for the personal interest you have taken and the various aids you have given to insure the best reception."

T. L. Cilley, Hickory, N. C.

SURPRISING RECEPTION

"Am very pleased with everything. Two hours after getting home had it operating on my old antenna and got surprising reception. Have read your instructions carefully and memorized same last night. I have no difficulty tuning in two English (London), two German, and one Italian (Rome), two French (Paris), one Spain, Madrid, Cuban and Mexican stations. Had clear reception on most of them with volume of a powerful local, the volume control only one-fourth on at that on some of them."

J. Saunders, Groton, Conn.

MARVELOUS TONE AND SELECTIVITY

"I believe the set to be everything you claim. It is a beauty externally, has marvelous tone and fine selectivity. I received VK3LR and VK3ME the other morning with more volume than I could use, incidentally, the needle was one-half way over on both stations. Picked up Melbourne testing with Canada at 8:00 P. M. on 11.4 mc. with perfect clarity. This station has been on from 7:00 P. M. to 8:00 or 9:00 P. M. several evenings. Europe is received perfectly. In closing, I wish to say that I expected a lot from your set and I firmly believe that I am going to get it."

J. M. Horn, Washington, D. C.

HEARS ENGLAND, FRANCE, JAVA, RUSSIA, JAPAN

"I like the tone on the broadcast band very much. The sensitivity-fidelity control adds considerably to the tone on the broadcast band, as well as improving DX reception on the short waves. The following is a brief summary of the short wave stations I have tuned in the last week: From England, GSC, GSL, GSB, GSE; from France on 11.90 meg. and 11.71; from Germany, DIG and DFL came in good; from South America, LSY at Buenos Aires; Colombia, Venezuela, Ecuador and also several Spanish stations from S. A. and Central A. that I haven't identified; from Russia, RV15, good reception almost daily; also received stations from Cuba, Mexico, Canada and Hawaii; from Australia, VK2ME and VK3ME; from Java, YDA, almost daily as well as several telephone stations from there; Java comes in loud most of the time; from Japan, several Japanese stations daily."

R. E. Miller, Oakland, Calif.

ENTIRELY LIVES UP TO STATEMENTS ABOUT IT

"I have received the SCOTT ALL-WAVE. It seems to entirely live up to your statements about it. The best compliment to the machine has been paid by Mrs. Drury. With quite an ear for music, she has complained that our old set was off tune when heard at a distance, but she says your set is absolutely true whether heard near or at a distance."

A. P. Drury, Washington, D. C.

TONE AS NATURAL AS HUMAN VOICE ITSELF

"Our SCOTT ALLWAVE RECEIVER arrived. The tone of this receiver is most wonderful, as natural as the human voice itself. I don't see how you can build a receiver that will reproduce such beautiful tones when all others have that dreadful 'boxed-up' sound, and when one raises the volume it blurs all over the place. But when we increase the volume on the SCOTT ALL-WAVE the speaker just talks louder and louder without the slightest blur."

F. Macauley, Vallejo, Calif.

FAR BEYOND EXPECTATIONS

"The set performed so excellently that it is far beyond my expectations. All the well known foreign stations came in so clear, steady and without noise or background hiss that you could not tell whether it was a high powered American station on the regular broadcast band or a foreign station."

A. M. Zimmerman, Fullerton, Pennsylvania.

AUSTRALIA EVERY MORNING BUT ONCE SINCE RECEIVING SET

"To date, May 23, I have been able to listen to the Australian stations VK2ME, VK3ME and VK3LR every morning, but once, since receiving the SCOTT on May 9th. Naturally atmospheric conditions have been unsettled for the past week, but during that time I have compiled quite a list of short wave stations which, to me, are a revelation of its ability. The volume from DJD, Berlin, is by far the most powerful station which I have listened to. When the North American Directional program is broadcast the volume from this station is so great that with the volume control less than one-fourth on it can be heard to the top of the house. It is so clear that I heard someone in the orchestra clear his throat during a lull in the program. I get absolutely no fading. I am absolutely astounded at its performance."

Gilbert W. Dixon, Rydal, Penna.

A BEAUTIFUL INSTRUMENT

"Just a few lines to let you know that the set arrived in perfect condition and I am delighted with it. It certainly is a beautiful instrument and the tone is wonderful."

H. W. Koster, San Francisco, Calif.

IMPOSSIBLE TO DESCRIBE RECEPTION

"I have tried most everything on the market and it is impossible to describe by letter the reception the SCOTT ALLWAVE RECEIVER gives. Really, you are in a position to get just about anything that happens to be in the air, and to get it in such a manner as to be received with PLEASURE. I try to make myself content in listening to Germany, England, France, Australia, Japan, Portugal, Holland, South American countries, Russia, and a few others. If I were to go in for logging and receiving series, there is no limit to the possibilities of stations you could secure from using this set. It is the greatest thing ever offered the radio buyer."

R. H. Duggan, Sandersville, Ga.

WHAT OWNERS IN FOREIGN COUNTRIES THINK OF SCOTT ALLWAVE RECEIVERS

A WONDERFUL INSTRUMENT

"First of all I want to really congratulate you on such a wonderful instrument as the SCOTT ALLWAVE which we have just had for a week. It is a fact that reception direct from Pittsburgh is equally as good as that from our local London regional station. The fidelity control, together with the bass control, gives one complete control of the reproduction, assuring such high fidelity as we have never before been privileged to hear. Thanking you again for the wonderful cooperation you have always shown me."

L. Keats, London, England.

APPRECIATES PERFORMANCE

"During my stay in Oeiras and afterwards at Sintra, I had the occasion to appreciate the performance in short waves on my SCOTT ALLWAVE, and for your information, I am going to mention below the reception I more insistently heard, as if they were issued by local stations: W8XK, W2XAL, W2XAD, W2XE, VE9JR, W3XAU, W1XAZ, W2XAF, PRA3, PSK, HJ1ABB, YV3BC, CP5, HJ3ABI, W1XAL, without, of course, taking into consideration the European stations which were heard with perfect neatness."

V. R. Santos, Lisbon, Portugal.

ENORMOUS RESERVE POWER

"I had heard other receivers, but none of them has the fidelity in reproducing the human voice or the musical sound as your receiver. Besides the gorgeous quality of tone, another characteristic that distinguishes it is its enormous reserve to pull into the loud speaker very far stations which to other receivers would be considered as unknown. All my friends who have heard your receiver agree to the effect of considering it the most perfect piece in radio workmanship."

Diego O. Marrero, San Juan, Puerto Rico.

EXTRAORDINARY SUPERIORITY

"We are pleased to inform you that the SCOTT ALLWAVE RECEIVER with Regent cabinet, including automatic record changer combination reached us in perfect condition. The packing was perfect, which made it possible for the cases to be transported in perfect safety. We have tested your new SCOTT ALLWAVE RECEIVER and it was with great joy that we found that your sets really show a great difference and extraordinary superiority from the viewpoints of sensitivity, tone quality, power, appearance and finish, as compared with other sets. We sincerely congratulate Mr. Scott for his creation and application of modern engineering in radio receivers."

F. M. Cassam-Chenai, Diego-Suarez, Madagascar.

A WORLD OF DIFFERENCE BETWEEN SCOTT AND OTHER RECEIVERS

"The SCOTT ALLWAVE RECEIVER has come up to all my expectations. Like a good soldier, it is always ready to meet any

duties required of it, and meet them it does—whenever and wherever they be. My SCOTT is always here prepared to meet my wants, be they short waves, medium or long waves. In actual results, what a world of difference there is between the SCOTT and other receivers, even those of repute. I liked my previous sets well enough, but I know now what radio reception can and should be. The SCOTT is bringing much joy and happiness into our home. For this we are greatly indebted to you, Sir, in return the least I can, and will do, is to recommend it freely and willingly your outstanding receiver to all my friends."

D. Polnay, Johannesburg, S. Africa.

PERFECTLY SATISFACTORY

"The receiver is perfectly satisfactory. I am getting excellent results from European stations—Berlin, London and Paris come in with a bang. The performance far exceeds what I expected. Prior to buying the SCOTT I had tried a number of receivers and results were not satisfactory, but reception on the SCOTT is equally as good as home radio stations."

K. Calvert, Chauk, Burma.

HEARS FOUR CONTINENTS WITHIN AN HOUR

"It might interest you to know that within an hour, last Sunday afternoon, I had four continents; Daventry and Zeesen perfectly, Pittsburgh about 4; Sydney at full strength with volume control about one-third on, and Bombay the same. Friends I have in, who are great wireless enthusiasts, say that they have never heard such perfect reproduction. As far as I am concerned I find wireless reception put on altogether a different plane now. Late yesterday afternoon the short wave emission on the Wales-Scotland match came through as well as anyone can have had it in England."

G. Elias, Ploesti, Rumania.

BEYOND EXPECTATIONS

"I have very much pleasure in advising you that I received my SCOTT RADIO per S. S. Haiti, and that same arrived in perfect, A No. 1 condition. Immediately upon receipt of the radio I assembled same myself, and following your instructions closely, I had no trouble whatsoever in getting immediate reception. I must really congratulate your firm for engineering such a masterpiece. The set turned out to be far beyond my expectation—the tone is entirely different to the ordinary set of radios, and reception from foreign stations is as clear as a bell. I have the set going for only two days and I have got reception from the following short wave stations: Madrid, EAQ; London, GSC; Boston, W1XAZ; Berlin, DJA; Schenectady, W2XAF; Barranquilla, HJ1ABB; Caracas, YV1BC; Caracas, HV3BC; Pittsburgh, W8XK; Paris on 25.20 meters; Bogota, HJ3ABF; London,

GSA; Berlin, DJC. Please take note that I have had reception from these stations with an indoor aerial and that they came in very powerful and clear."

R. Calderon, Trinidad, B. W. I.

PERFORMANCE MAGNIFICENT ON ALL WAVE LENGTHS

"I am pleased to inform you that I received my SCOTT ALLWAVE RADIO four days ago and it arrived in perfect condition. I can assure you that I consider this set as a jewel for its beauty and high quality, and I am quite satisfied to have purchased it. Its performance is magnificent on all wave lengths and its purity of tone is admirable. It is all that a real radio fanatic can wish, and with the enthusiasm that prompts me to write you I cannot help congratulate you, as deserved, by the magician in radio reception. Your receiver is being highly admired by many persons who have seen and heard it, and in giving you this explanation I am merely performing a duty of justice."

A. Ortega, Ciego de Avila, Cuba.

INCREDIBLE NUMBER OF STATIONS RECEIVED

"This serves to thank you for the SCOTT ALLWAVE RECEIVER. I am very much satisfied with the result, not only as regards the musical tone, but also because of the incredible number of stations which can be received at any time with the maximum of clarity. I have heard very distant and low power stations just as if they were local stations."

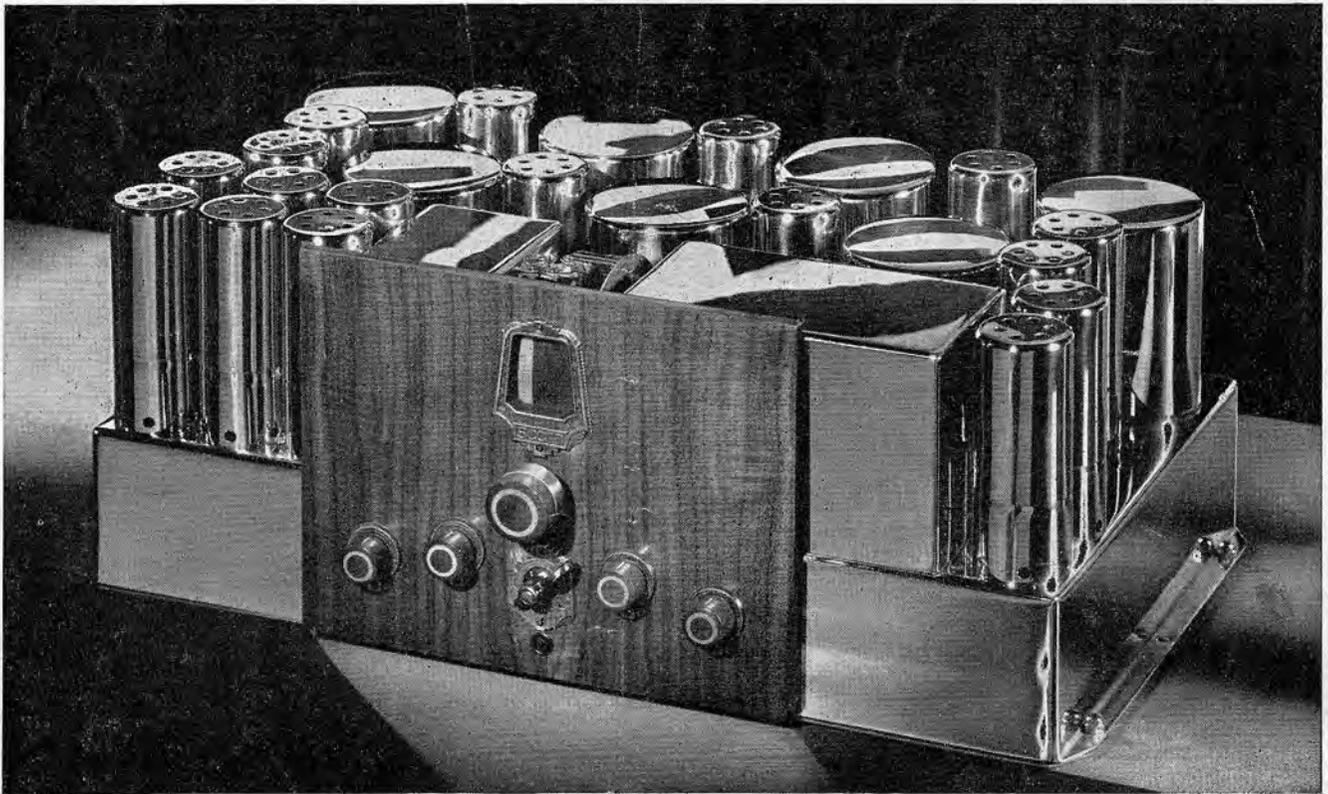

R. Sanmartin L., Bogota, Colombia.

DOES NOT BELIEVE ANY SET COMPARES WITH SCOTT ALLWAVE

"I feel that you will be interested in the reception I have been having on my SCOTT ALLWAVE RECEIVER. I use this set mostly on short wave as it is seldom that long wave reception is good in the tropics. During one month I logged 81 short wave broadcasting stations in 26 different countries. This does not include any police stations, airplanes nor amateurs. It only includes stations that were received with good, clear loud speaker volume. Included in this list were stations in Japan, South Africa, Australia, Brazil and Argentina. Last Saturday afternoon and Sunday I logged 47 stations in 21 different countries in about five hours. The English and German stations are exceptionally good, specially on the 19 meter band in the morning. Holland and Russia also come in very good, though they are not as regular as the English and German stations. I have been using short waves since 1927 and do not believe there is any set that compares with the SCOTT ALLWAVE for tone quality and reception."

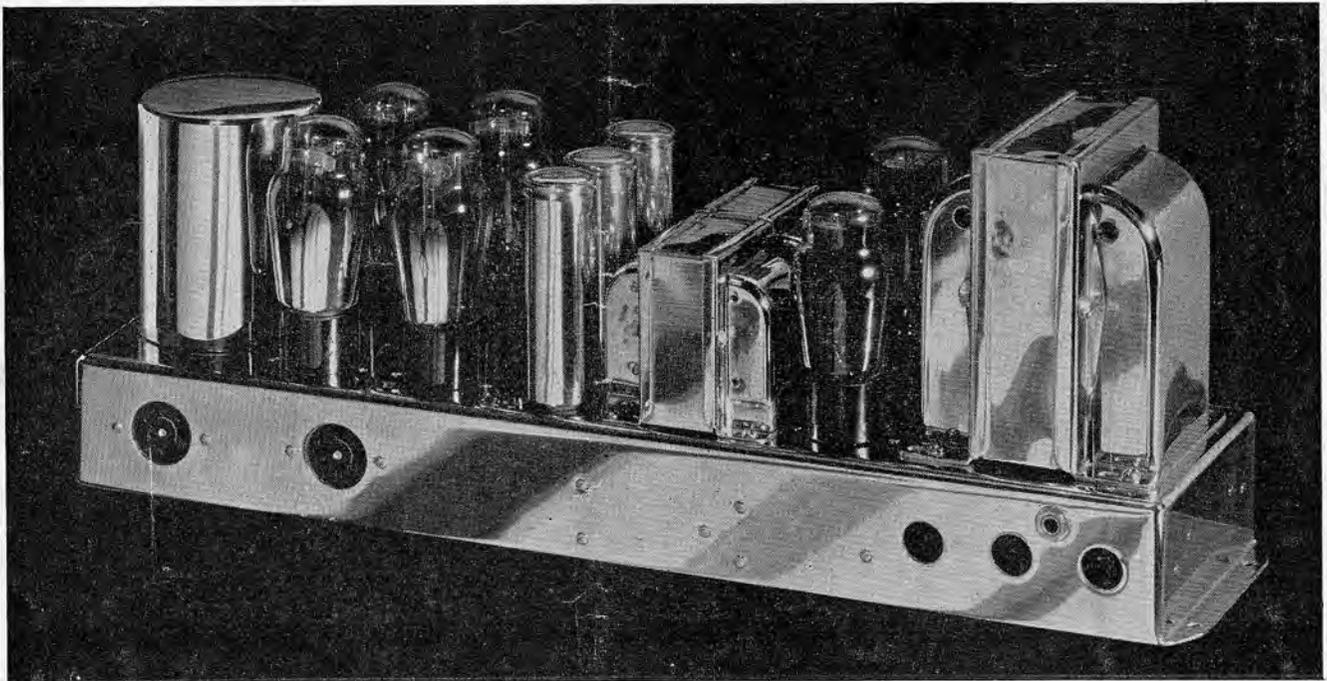

I. F. Mattson, Oriente, Cuba.
