BARKER

“
Be a Radio Explorer

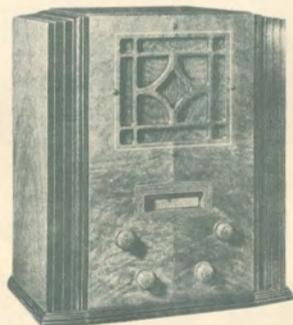

Tuning in on these new 1935 American-Bosch Round-the-World Radios is almost as thrilling as actually sailing to foreign lands!”

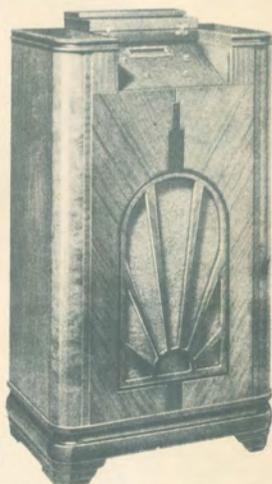

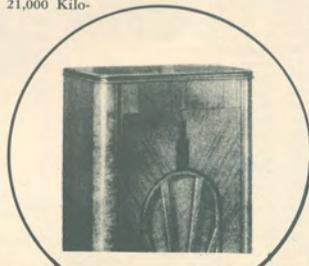

MODEL 402—5 tube, 8-tube-performance. Dual wave Personal radio. For AC-DC operation. Range 540 to 1750 Kilocycles. Generous volume.

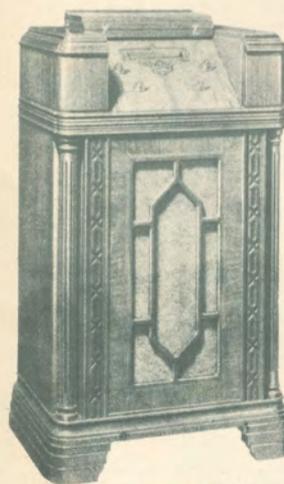

MODEL 460A—7 tube, 9-tube-performance. All wave superheterodyne console radio. Range from 540 to 21,000 Kilocycles.

MODEL 460B—7 tube, 9-tube-performance. All wave superheterodyne console radio. Range from 540 to 21,000 Kilocycles.

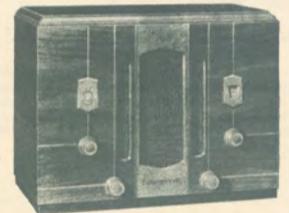

MODEL 460R—7 tube, 9-tube-performance. All wave superheterodyne console radio. Range from 540 to 21,000 Kilocycles. Shown at left with lid closed.

MODEL 480D—10 tube, 12-tube-performance. All wave superheterodyne console radio de luxe. Range from 540 to 22,500 Kilocycles. Shown at right with lid closed.

MODEL 440C—6 tube, 9-tube-performance. Standard and short wave superheterodyne console radio. Range 540 to 1600 Kilocycles and short wave from 5600 to 15,500 Kilocycles.

MODEL 420—5 tube, 8-tube-performance. Dual wave Personal radio for AC operation. Range 540 to 3600 Kilocycles with special focus on police calls.

MODEL 440T—6 tube, 9-tube-performance. Standard and short wave superheterodyne console radio. Range 540 to 1600 Kilocycles and short wave from 5600 to 15,500 Kilocycles.

“Forty-one times I have sailed around Cape Horn in windjammers. I’ve had many an adventure in almost every country in the world.

“And by gad I may tell you, all these experiences come crowding back to me as I sit twisting the dials of my American-Bosch Round-the-World Radio. I’m transported once again to the lands that haunt my memories.

“It’s almost as thrilling as actual adventure itself! Twirl the dials! At 3.56 Megacycles you’re in Copenhagen, Denmark. At 6.00 Megacycles you’re in Barcelona, Spain. At 9.51, England; at 15.12, Rome; at 19.90, Buenos Aires; with hundreds of stations in between, including amateurs, aircraft radio, local police calls, and ship to shore conversations.

“The American-Bosch people have made it mighty easy to tune in these foreign ports. They have what they call a Multi-Wave Selector that’s the simplest contraption one could imagine. Just turn a knob and any one of four different colored tuning bands you desire comes into view. Automatically all circuits and tubes of the receiver are concentrated on the wave lengths covered by that particular band. Only one tuning scale is visible at a time.

“They tell me no other radios have this same simplified tuning feature.

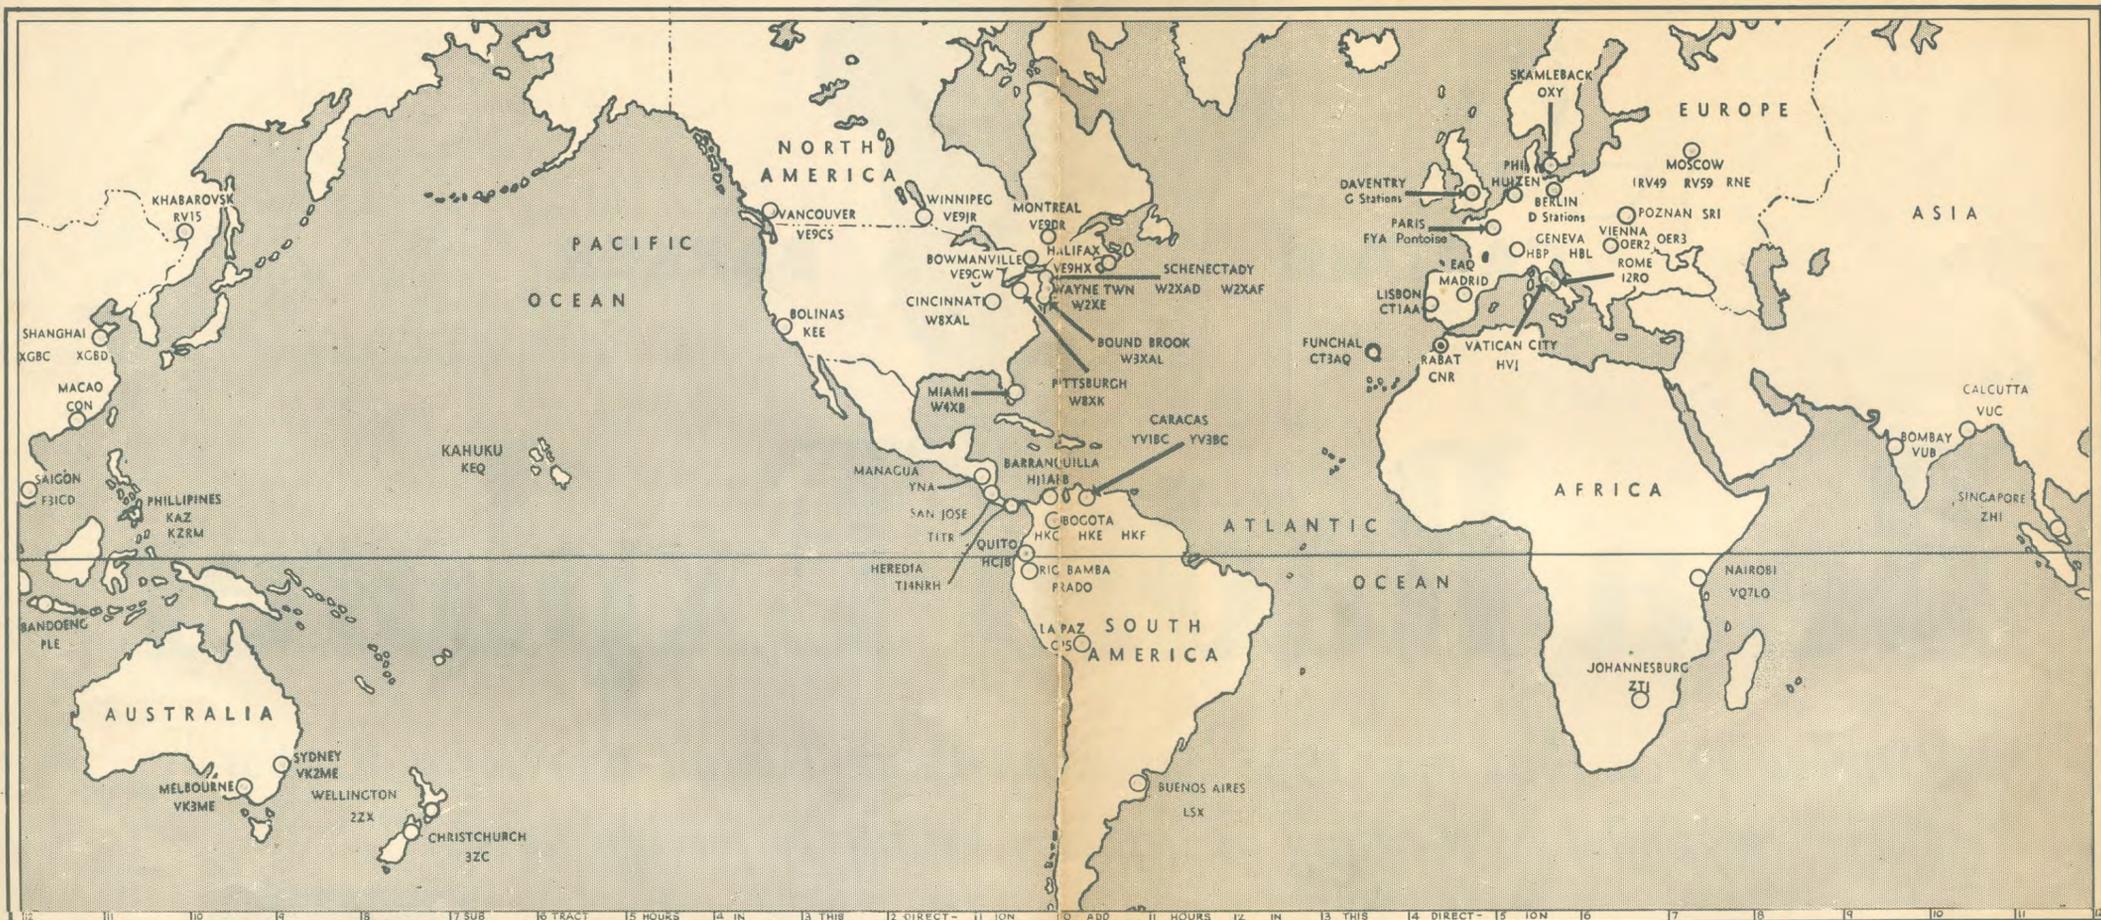

“Yes, you can take this tip from me: that you’ll never know how exciting and realistic all-wave radio can be until you go exploring on one of these American-Bosch Round-the-World Radios. They’re mighty trim looking too, every one of them, as you can see for yourself.

“And by the way, they’ll add to the fun of listening to stations here in our own country. By gad, I’ve never heard the equal in tone brilliancy and general performance that is yours to enjoy with a new 1935 American-Bosch Round-the-World Radio.”

(Signed) *James P. Barker*
MASTER MARINER
Commander, American-Bosch Radio-Explorers Club

AMERICAN-BOSCH
Round-the-World **RADIOS**

AMERICAN-BOSCH RADIO EXPLORERS CLUB AUTHORIZED RADIO MAP OF THE WORLD WITH LOG OF FOREIGN STATIONS AND POLICE CALLS

American-Bosch and all other modern all-wave radios are tuned in Megacycles. To determine location in Kilocycles of any station listed above, merely move decimal point three places to right. To determine wave length in Meters, divide the number of Megacycles into 300. For example, Station EAQ, Madrid, at 9.86 Megacycles corresponds to 9860 Kilocycles; or 9.86 divided into 300 equals 30.45 Meters.
