Explaining the Station Lists

Beware!!--Don't Let This Happen to You

Ultra long-wave stations of the world by frequencies

Long-wave Stations of the World by Frequencies

Medium- and Short-wave Stations of the World by
Frequencies

VOL. I - NO. I

25¢ the copy in the United States

30¢ elsewhere

from the editors....

We hope you'll find this magazine helpful to you in your DXing. That is the thought uppermost in our minds. If you find anything here which you do not like don't be afraid to write us and say so. We'll try to remedy the condition. However, if you like this, please tell your friends to shoot along their money for a copy. We have great things in store, and the mail is coming to our "P.O. Box 1" by the dozens: Already we have received enough dope to make up another issue. Since the writing of our station-lists we have received a complete list of Chilean long- and short-wave stations, a list of Manchukuoan stations, and from the F.C.C., a list of American short-wave stations right up-to-date. Well, anyway, enough of this--if we tell you too much you'll be dissatisfied with this issue. We repeat again, above everything else we hope you'll find this magazine indispensable to your DXing.

-- * --

The cost per copy to readers in the United States will be 25¢ while for Canada and other foreign countries it will be 30¢. Subscriptions will be .75 for the United States and \$1.00 elsewhere. Since, this is issued quarterly, that will cover four issues. The date of issuance for the annual round of issues follows: Sept. 1, Dec. 1, Mar. 1, and June 1. Remittance, whether you reside in the United States or in Java, should be made for your protection and ours by draft or by money order--do not send stamps.

-- * --

With your help, in our Dec. 1st issue we would like to inaugurate what we have named "Our Mailbox", where our readers' letters will be reproduced if we think they are of general interest. Stories of radio stations, an interesting DX experience of yours, your latest catches and verics, all come under this heading. In order that your letter may not be stale, mail it along about the middle of November. If all of you do your part we will have a rip-snortin' get-to-gether in the next issue.

-- * --

We have an order pending to mimeograph company for styli, plates, and different cases of type so that we will be able to have a more presentable issue on Dec. 1. We are sorry that multi-graphing does not permit us to reproduce photographs, but if you have a good interesting drawing, mail it to us and we'll reproduce sure 'nough.

-- * --

We realize that under the present scheme of things, many DX tips will be useless by the time issue time rolls around, so, with your help, we would be willing to start a mailing service whereby every time we receive a flash, we would shoot it along on a postal card to all our readers. Necessarily, we would have to charge a small sum for the cards, but we believe this would be offset by the value of the service. If you are in favor, signify by writing us so that we may get underway before the season is too far gone.

The Radio Listener

If you are an SWL card addict and are willing to send your card to all who reply to your ad, send us your name and address and we'll let our readers do what they can for you. If you desire correspondence from a fellow-DXer, write us and we'll publish your ad in the next issue.

-- * --

If you have a good antenna, write and let us tell your fellow-readers about it. If you have a good radio, give us a write-up regarding it. Tell us how old it is, the number of tubes, types of tubes, type of circuit, stations heard, etc.

-- * --

Following are some small items which may be of interest to you. Before we let you look at the lists, let us ask one thing more--please help by sending us the latest information regarding all kinds and types of radio stations. You will be given due credit and you will thus have helped your fellow-DXer.

* --

...Our interpretation of the appropriate names for the various frequency bands follow; these will be used hereafter in this magazine and should aid you in interpreting correctly when we mention either the frequency or the designation:

1-	500 kcs. ultra-long
500-	1600 kcs. long
1600-	5000 medium
5000-	25000 short
25000-	infinity ultra-short

...XEBG promises to verify only distant reports which are accompanied by return postage.

...As of June 1, 1938, it was estimated that there was a total of some 2400 receiving sets and 27 transmitting sets in Haiti.

...Mail to Finnish stations will be delivered if addressed, for instance, to Viborg: Rundradiostation Viborg, Viborg, Finland.

...Owing to unfavorable atmospheric conditions prevailing in Java, no wave-length below 500 metres to 200 metres may be used for broadcasting.

...Ceylon 10 $\frac{1}{2}$ hrs. faster than eastern standard time.

...Available statistics show that Portuguese East Africa imported during 1936 85,244 dollars worth of radio sets and spare parts, of which the United States furnished 76%. There are now about 2500 receiving sets in the colony.

...Call letters in Chile indicate geographical position. "CA" refers to the northern provinces; "CB" to those of Santiago and Valparaiso; "CC" to the south central provinces from O'Higgins to Valdivia; and "CD" from Valdivia to and including the territory of Magallanes.

EXPLAINING THE STATION-LISTS

The first item given regarding any station is the frequency in kilocycles beside which, in parentheses, is given the wave-length. Immediately below the frequency is given the call letters, if any, of the station. The first item to the right of the station's call letters is the power output of the station in kilowatts--thus .15 signifies 150 watts, while 150. signifies 150 kilowatts. To the right of the power ~~the~~ station's location. The exact frequency in kilocycles follows this if the station operates on a split-frequency. The information following this is not arranged in any particular order, however, the information given regards the following items only: (1) mailing address--street or box number, (2) schedule in eastern standard time, (3) type of interval signal used between programs, (4) type of signal or name of musical selection used at opening and closing of transmissions, (5) slogan or other group of words by which the station may be identified, (6) the verification policy of the station in question, (7) call letters and frequency of any station which is relayed by station in question (UL: LYX, 153 signifies that the station is relayed on ultra long-waves--UL--by LYX, 153 kilocycles.)

In order to eliminate doubt as to correct sked, we have decided to utilize the 24-hour clock as the medium. The day begins at 0000 which is midnight and ends at 2300 which is 11 P.M. 1 A.M. is 0100, 2 A.M. is 0200, and so on down the line. As we said above, all time is eastern standard time which is 5 hours slower than Greenwich mean time, or 3 hours faster than pacific standard time.

.....
Beware!!--Don't^NThis Happen to You...
Let

In our correspondence with radio stations, we are sometimes told of incidents whereby the station receives a reception report from an individual who, without a doubt, had never heard the station. Upon our receiving any more reports of this nature from radio stations, we will print the name of the offender in big black letters in this magazine. In order not to be turned down by the station and also in order not to raise any doubt as to the validity of your report, be sure to send at least 15 minutes' account of the program. If the station has relays on other bands, listen for the identification announcement of the station to which you are listening and send in as clear an account of this as possible. If after listening for half or three-quarters of an hour you are still in doubt as to the station's identity, send a report to stations on or near the frequency and be sure to tell them that you are not sure it was they, but you are sending the report in the hope that it was. In this way mistakes are excusable and you may not rightfully be branded a fraud. For the station's benefit, give the following information: (1) amount of natural static, (2) quality of the signal by the QSA method which is now almost universally used, (3) volume with which the station was received by the "R" method, (4) amount of fading frequency of fading and regularity of irregularity of fading, (5) if there is interference from any other station, give its call letters and frequency and give an estimate as to extent of interference, (6) if you have a barometer, give the pressure; if a thermometer, the temperature. Also, give condition of the sky, such as: cloudy, partly cloudy, clear, and so forth. Also, enclose return postage unless the station is known definitely to verify without it. For your sake, be sure that your address is displayed prominently on the letter and envelope.
