

1974

World Radio & TV Handbook

A Complete Directory of International Radio and Television
published December 1973

Acclaimed:

Each year brings a better and more expanded edition and with each passing year we have come to expect more

*Radio & Visual Services
Division, UN Radio*

Every department of the Swiss Broadcasting Corporation's European and Overseas Services uses the WRTH as the most reliable handbook for broadcasters. It seems nearly impossible not to find whatever one is looking for.

The World Radio-TV Handbook

is the only authoritative source of complete and exact information about all broadcasting and television stations around the world.

Used and re-used constantly by Shortwave Listeners, DX-ers and DX-Clubs, Radio and Television Stations (programme personnel and technical staff), producers of radio and television receivers, manufacturers of transmitting and studio equipment, technical interested amateurs, and in fact anyone with a working interest in world radio and television.

It began in 1923. A shortwave transmitter gave the first practical demonstration of shortwave broadcasting during the Arctic expedition headed by Commander Donald R. Macmillan.

In the half century since the expedition shortwave broadcasting has grown from a single transmitter linking two continents into a worldwide medium, with some 1300 transmitters sending signals around the globe. There are now, approximately 140.000.000 radio receivers around the world that can tune shortwave transmissions and more than 40 million of these radios are in daily use.

The World Radio TV Handbook's authoritative compilation of precise information about all broadcasting- and television stations around the world has earned endorsements from the UN, UNESCO, European Broadcasting Union, International Radio & Television Organisation, Asian Broadcasting Union and leading broadcasting organisations from every continent.

Contents of the WRTH include the following:

Close to 375 pages of detailed information about radio & television stations in every country in the world including the following for each station: Addresses, personnel, frequencies used, powers, time schedules, announcements (incl. slogans), interval signals, verification policy, and tables with more than 56 pages listing all Long & Medium Wave stations of the world arranged by continents and also 26 pages listing all active short wave outlets by order of frequency (incl. call-sign and power for each), in other words: the handbook contains everything a listener needs to know in order to tune in to a station.

A recent survey reveals 67 % of the owners of the World Radio TV Handbook use it daily and up to 20 times per week. Still another 19 % use it up to 50 times weekly.
